**SIERRA PACIFIC
INDUSTRIES**
Growing Forests For Our Future

Sierra Pacific's confidence in the future is solidly rooted in some of the finest timberland in the world. Stretching from near the Oregon border on the Pacific Coast to Central California near Yosemite, Sierra Pacific lands grow Ponderosa Pine, Sugar Pine, White Fir, Douglas Fir and Incense Cedar. Sierra Pacific lands represent the largest private industrial forest ownership in North America.

It is our mission to conserve the productive basis of this land and associated resources by maintaining the integrity of biological and ecological processes while producing commodities and other services through the concept of sustainable forestry. Our forest management creates a diverse array of wildlife habitats while sustainably producing forest products.

Sierra Pacific Industries is a proud participant in the Sustainable Forestry InitiativeSM program (SFI)SM, a national program of the American Forest & Paper Association. Through our compliance to the SFI program, Sierra Pacific guarantees a commitment to forestland stewardship that is responsive to changing human values and advances in scientific knowledge. As part of this commitment, Sierra Pacific Industries grows more wood than we harvest each year.

Sierra Pacific Industries is one of the nation's leading manufacturers of moulding and millwork. A variety of products are manufactured and several different markets are served. Stiles, rails and jambs for the steel door industry are produced as well as clear or finger jointed items for export to foreign markets. Traditional moulding and millwork for interior trim are produced for distribution throughout North America.

Sierra Pacific's central distribution center at Richfield is a production facility incorporating the most modern equipment available for quality assurance. Eight-head Weinig moulders are utilized in the Richfield plant providing the same precision finish for lumber that is expected in traditional millwork. Finish selects and commons are processed for marketing to the nation's distributors of quality softwood. Distribution center products are in the minds of sawmill operators as they break down a log into its approximate final dimensions. Selected rough dried lumber from company sawmills is shipped to Richfield where it is surfaced or "run to a pattern" and assembled in random-length packages to customer specifications.

Douglas Fir Timbers

Sierra Pacific Industries invites you to experience all the advantages of quality solid sawn Douglas Fir Timbers. This natural, non-engineered wood is harvested from some of the finest timberlands in the world. Douglas Fir is a strong, reliable and workable wood providing outstanding results in any of its uses in residential or commercial building. There is no glue and absolutely no chemicals added to this pristine wood. Sierra Pacific offers a variety of products from custom sawn specialty timbers by the piece to rail car quantities of stock timbers. Sierra Pacific embraces the commitment of providing on-time delivery of a quality product.

**SIERRA PACIFIC
INDUSTRIES**
Growing Forests For Our Future

Seedlings planted today will not be harvested until late in the twenty-first century. Sierra Pacific lands produce several hundred million board feet of timber annually on a sustained yield basis.
